Rakesh Neela

+1-510-309-9296 | mailtorakeshneela@gmail.com | linkedin.com/in/rakeshneela

Professional Summary

Senior iOS Engineer with 12+ years building enterprise mobile applications at scale. Expertise in Swift, SwiftUI, offline-first architecture, on-device AI Integration and system design, driving measurable impact. Led cross-functional teams improving velocity by 100%. Reduced production crashes by 70% and established 90%+ unit test coverage standard. Shipped consumer-facing, enterprise, and in-house applications at scale.

Technical Skills

Languages: Swift, Objective-C, Kotlin, Java, JavaScript, Python, SQL
iOS Frameworks: SwiftUI, UIKit, Combine, Core Data, WidgetKit, AVKit, ARKit, Push Notifications, Deep Linking, Universal Links
Architecture: MVVM, Clean Architecture, Coordinator Pattern, Dependency Injection, Modular Architecture, Offline-First Systems
Security & Performance : Instruments, Time Profiler, Memory Graph, Leak Detection, Thread Sanitizer, Energy & Performance Optimization, Swift Concurrency (async/await, Actors), GCD
Testing: XCTest, XCUITest, Unit Testing, UI Testing, SonarQube
Networking & Security: REST APIs, URLSession, Codable, OAuth 2.0, SSO, Keychain, Biometrics
AI Integration: LLM Integration, Core ML, Vision Framework, Natural Language
Tools & Cloud: Xcode, Gitlab, Swift Package Manager (SPM), App Store Connect, TestFlight, Agile, Firebase, AWS, Azure, Cloud Functions
Kiosk, Payments & Commerce: Stripe, Square, Clover, POS Systems, Order & Pricing Engines
Additional Experience: Android (Kotlin, Jetpack Compose), React Native, BLE, SQLite

Experience

Technical Lead - iOS May 2021 – Present
IQVIA *Mesa, Arizona*

- Led end-to-end iOS development for Orchestrated Customer Engagement platform, supporting 200+ pharmaceutical and life sciences enterprise clients and 100K+ global users across iPad and iPhone, improving field productivity and engagement at scale
- Serve as subject matter expert for 40+ revenue-critical components including orders, medical inquiries, accounts, and call modules driving core business value
- Architected offline-first mobile system with complex data synchronization across 5 platforms and 30 languages, enabling teams to operate with local decision-making capabilities in zero-connectivity environments
- Reduced production crashes by 70% through systematic resolution of memory leaks, race conditions, and performance bottlenecks using Instruments profiling and crash analysis tools
- Achieved 90%+ unit test coverage with zero major/critical SonarQube issues and recognized company-wide as SonarQube Leader
- Led cross-functional team of 14+ engineers (iOS, Backend, QA), coordinating technical execution, mentoring engineers and improving sprint velocity by 100%
- Built AI-powered macOS tool with LLM-based semantic search for knowledge management across 50+ Slack channels with 7+ years of historical data, reducing retrieval time by 60%, and improving cross-team knowledge sharing
- Established Swift coding standards, architecture patterns and iOS best practices while driving organization-wide engineering standards, ranking #1 in code review engagement
- Developed internal iOS tools reducing localization bugs by 80% and saving 10+ engineering hours per release

Senior Software Engineer - iOS March 2019 – April 2021
Gap Inc. via CA-One Tech Cloud Inc *San Francisco Bay Area*

- Led iOS development for enterprise store applications across Gap, Athleta, Banana Republic, and Old Navy serving 85,000+ users in 3,500+ stores across 40+ countries
- Architected and led delivery 4 of 6 applications: InStock, Back of House, Ship From Store, and Buy Online Pick-up In Store, improving operational efficiency by 25% and inventory accuracy through optimized mobile workflows
- Built offline-first architecture with local decision-making capabilities enabling real-time store operations in network-constrained environments using Core Data and advanced caching strategies

- Reduced app crashes by 30% and improved load times by 50% through Core Data optimization, performance tuning and memory management best practices
- Developed reusable iOS frameworks and CocoaPods reducing cross-team delivery time by 30% and establishing shared component libraries across organization
- Rapidly prototyped and production deployed COVID-19 health monitoring app in 3 weeks supporting all retail locations nationwide under critical business constraints

Software Engineer September 2017 – March 2019

Walmart eCommerce via Cognizant *Bentonville, Arkansas*

- Designed and developed iOS AR applications using ARKit and Core ML to evaluate face recognition and secure access workflows for enterprise security use cases, integrating on-device ML models for real-time face detection and recognition without network dependency
- Developed and supported store applications for Item Setup, Grocery, Catalog, and DataOps teams optimizing retail operations and improved store efficiency through web and mobile workflows
- Mentored 8 engineers (offshore and onsite), reducing sprint turnaround time by 2 days through knowledge sharing, and agile process improvements

Software Engineer Intern May 2017 – August 2017

InfiniteKey *Holland, Michigan*

- Developed iOS BLE-based keyless entry platform for vehicles, home appliances, and workstations, contributing to product later acquired by Denso
- Optimized multi-threading using GCD and NSOperation, reducing app load time by 10 seconds through performance profiling and asynchronous programming patterns

Student Software Engineer January 2016 – April 2017

Grand Valley State University *Grand Rapids, Michigan*

- Designed, developed, and maintained university iOS and web applications supporting administrative staff operations and Center for Entrepreneurship and Innovation programs using Swift
- Built and published Upward Bound iOS application for staff workflow management, reducing task execution time by approximately 10 minutes per workflow and earning Best Project recognition at GVSU Innovation Awards
- Developed OrthoForge application using MATLAB-based mathematical models to simulate and monitor bone growth for orthopedic research and analysis

Lead Software Engineer September 2014 – December 2015

ReTiSense *Bengaluru, India*

- Led development of Stridalyzer, IoT-based fitness tracking application using BLE technology
- Built iOS app and web dashboard with real-time runner analytics, playback, and heat maps
- Shipped product to App Store and promoted to Lead Software Engineer for technical excellence

Engineer August 2012 – August 2014

Skyfi Labs *Bengaluru, India*

- Developed centralized Java-based applications to modernize legacy internal systems, improving maintainability and accessibility of organizational data
- Conducted hands-on technical workshops focused on iOS, Android, and Web technologies for various students and professionals, strengthening skills

Research Intern January 2011 – December 2011

Indian Institute of Technology, Bombay *Mumbai, India*

- Implemented Inductive Logic Programming-based system to consolidate multiple legacy applications into unified architecture, improving maintainability, scalability, and data consistency
- Collaborated with researchers and programmers building unified architecture using Java and C

Education

Grand Valley State University Grand Rapids, Michigan

Master of Science in Computer Information Systems *2015 – 2017*

Jawaharlal Nehru Technological University Hyderabad, India

Bachelor of Technology in Computer Science *2008 – 2012*

Selected Certifications & Recognition

Professional Certifications: Swift Certified User (Apple) | GitLab Certified Git Associate

Honors: SonarQube Leader | #1 Code Review Engagement | IIT Bombay Research Fellowship | Best UI Design (IIIT Hyderabad & UMO) | Best Project (GVSU Innovation Awards)
